## Comfort Control Zoning System

The Easy-to-Install, Easy-to-Operate, Room-by-Room Temperature Control System!

- Why settle for "unbearable" temperature control in your two-story home? If it's comfortable downstairs, it can be verging on a heat wave upstairs . . . or if it feels comfortable upstairs, it can be like a meat locker downstairs!

### Bonus room unoccupied

- DigiTract allows you to heat or cool only the rooms you desire . . . infrequently used rooms can have their thermostats set back or turned off, saving energy and reducing costs.

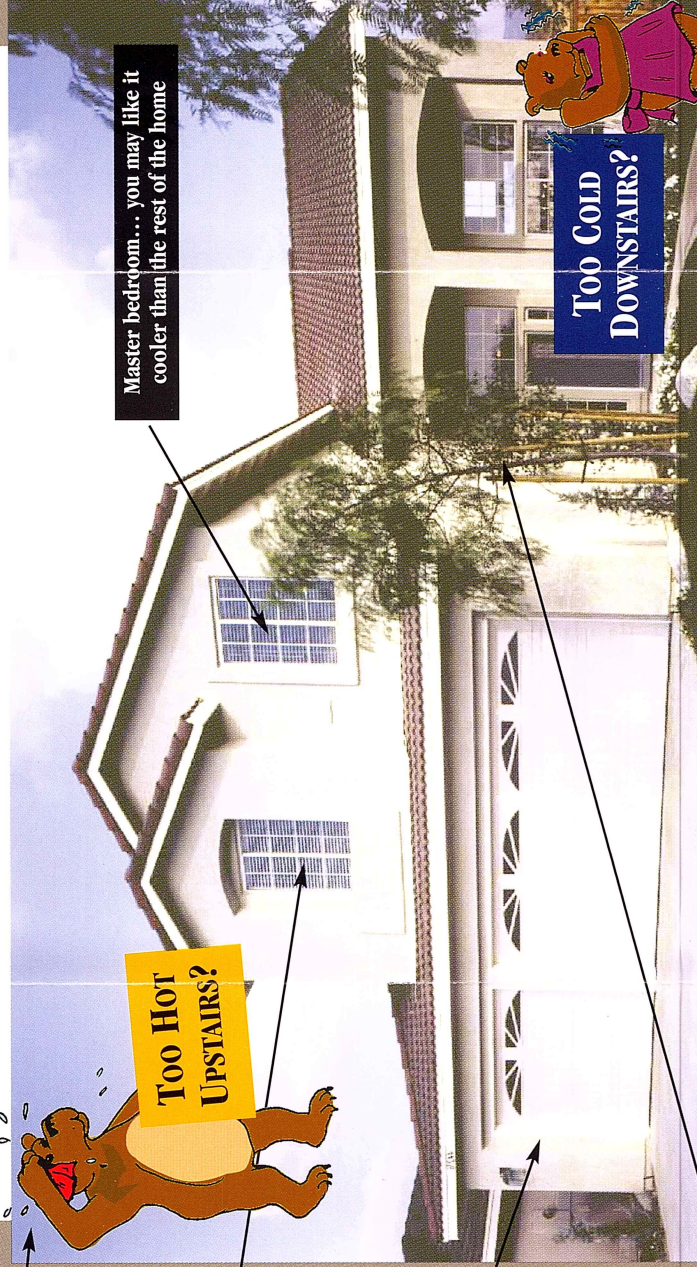

### Home office occupied

- With DigiTract, individual rooms can be temperature controlled . . . no more arguing over where to set the thermostat.

### Temperature sensitive people like baby, or grandma's room

- The heating and cooling load of most buildings changes during the day, causing temperature fluctuations and discomfort. With DigiTract, you can control room temperatures in west- or south-facing rooms that are subject to more sunlight throughout the day.

### Kitchen . . . gets too hot when cooking

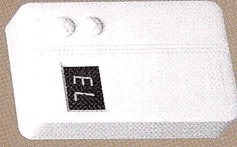

Master bedroom . . . you may like it cooler than the rest of the home

Too COLD DOWNSTAIRS?

Too HOT UPSTAIRS?

One light switch for the whole house sound ridiculous???

Yet most houses have only one thermostat!

The Solution is . . . Zoning . . . it gives you room-by-room temperature control!

Most homes have a single thermostat, set at one temperature for the entire house — the only way this truly works is if you live in a one-room house! You wouldn't use a single light switch to control every light in your home — but that's what happens when a home is controlled by a single, whole-house thermostat.

Zoning is individualized room temperature control that utilizes multiple thermostats and can be operated with your present heating/cooling system. It directs the heating or cooling only to the rooms you choose.

The DigiTract system is easy to install and simple to operate.

DigiTract redefines home comfort — one room, one floor or one area at a time — the low-cost, sensible temperature-control solution for two-story and ranch-style homes or townhomes — structures requiring two or more different heating and cooling zones. With DigiTract there's no more shivering downstairs or roasting upstairs.

Experience total home comfort with DigiTract. It is easily installed on your new or current heating/cooling system and is fully compatible with most every thermostat. DigiTract saves energy and maintenance costs because it operates only when and where it's needed.

If you are building or remodeling a home, or just replacing an older heating/cooling system, talk to your contractor about the DigiTract Comfort Control System — the system that lets you take control!

## BRING COMFORT HOME WITH ZONING

Why spend another day in discomfort?

A California Economizer Zoning System is easily installed with new, remodeled, retrofitted or previously installed heating and air conditioning systems.

## What People Say About Zoning

### Homeowner...

#### I choose comfort for my family...

I spent a lot of time choosing the color scheme, carpets, appliances and furnishings for my new home. Yet I didn't realize we could control the temperature of each room. I was so glad when my heating and air conditioning contractor informed me about zoning. It's the one feature that the whole family enjoys.

### Office Suite Manager...

#### Zoning Saved Me!

With fifteen office spaces leased to fifteen different professionals I nearly went mad looking for a heating and cooling solution that kept them all happy! My HVAC contractor said he could solve my problem – and he did with a California Economizer Zoning System. Then, I nearly went mad with joy! Now, if he could only solve the parking problems!

## Take control of...

heating and cooling systems at...

Home and Work

Anywhere people are

TOO HOT or

TOO COLD!

### Take the Zoning Comfort Quiz...

1. If you live in a two-story home, is the upstairs too cold in the summer and too hot in the winter?  
 yes  no
2. Can't sleep at night because you're too hot or too cold?  
 yes  no
3. Would you like more thermostats in your home?  
 yes  no
4. Do you have multiple heating or cooling units?  
 yes  no
5. Do you wish you could control the temperature room by room?

If you answered yes to any of these questions, you may need zoning. Ask your heating and air conditioning contractor about a zoning system for your home and tell them that you'd like to see the video on zoning.

The heart of the home is comfort and comfort is the heart of zoning!
